ANNEXURE I

Specifications for Influenza A typing RTPCR kits:

[To differentiate between H1N1 (pdm09), H3N2, H5N1, and H7N9]

- Should be in a kit format,
- Should be CE_IVD certified with documentary evidence
- Bids must include external quality assurance results for performance evaluation
- Should be lyophilised with mastermixes distributed in individual PCR wells which can be used directly for testing
- Should have positive control in the kit and not to be purchased separately
- Kits must be compatible with ABI 7500Fast Dx, CFX96, which documentary evidence must be provided from the manufacturer along with programming guidebooks / manuals from the manufacturer, without needing any additional software to be purchased.
- The kits should have extended stability of atleast 15-18 months from the date of manufacture and documentary evidence from the manufacturer
- Must be able to differentiate between H1N1(pdm09), H3N2, H5N1, and H7N9
- Must have a lower limit of detection not exceeding 20 RNA copies per reaction
- Influenza A typing RTPCR tests must have same run template so that they be performed both simultaneously or independently the same PCR run. The protocol for the same must be validated by the manufacturer
- Should use common channels FAM, ROX, HEX, JOE or VIC for detection and not specific machine dependent channels for highest sensitivity
