## ANNEXURE I

### Specifications for RT-PCR kits :

- Premix of primers and probes should be in single tube, preferably 20X concentration
- Should use common channels FAM, ROX, HEX, JOE or VIC for detection and not specific machine dependent channels for highest sensitivity
- The premix should be designed with universal annealing and extension and unique thermal cycling conditions.
- Preferably run with other premixes (different targets) in same real time PCR run conditions
- Kits must be compatible with ABI 7500Fast Dx, CFX96, which documentary evidence must be provided from the manufacturer along with programming guidebooks / manuals from the manufacturer, without needing any additional software to be purchased
- Bids must include external quality assurance results for performance evaluation
- The kits should have extended stability of at least 12 months from the date of manufacture and documentary evidence from the manufacturer
- Should be validated from respiratory samples by the manufacturer
- Should detect and differentiate between the pathogens by targeting the specific gene of RSV A, RSV B and Rhinovirus.
